about me

Tech Enthusiast. Computer Geek. Creative. These are just a few of the ways my peers describe me. I like to consider myself to be a Technical Artist; my background with development and my focus on design has allowed me to utilize the combined power of both of my left- and right-brained skills. I can adapt very easily to new working conditions and always strive to do the very best that I can! Visit my portfolio at kevintrehan.com if you'd like to see some of my work. Feel free to send me an email at contact@kevintrehan.com if you'd like to get in touch!

education

B.S. of Media Arts and Science

Indiana University-Purdue University Indianapolis (IUPUI)

May 2014

work experience

North American Retail Hardware Association (NRHA)

Web Developer

January 2015 - Present

The NRHA is an association for independent hardware retailers throughout North America. As the web developer, it is my duty to maintain all of the websites related to the NRHA that are built in WordPress, send weekly email newsletters, and create new web pages as needed.

Developer Town

Web Design and Application Development (Contract)

June 2013 - August 2013

This was a contract job for which I created a crowdfunding platform for nonprofit organizations and small private businesses. The platform was created in Ruby on Rails. During this time, I also helped design a few other platforms although they were not in the development phase during my time there. All designs were created using primarily Adobe Fireworks and Photoshop.

Indiana University

Web Applications Developer

October 2010 - June 2014

Designed and assisted with development of the front-end (HTML/CSS) for some university resources, such as IU Search (utilizing Google Search Appliance), the Podcast Portal (iTunesU), and Go.IU (URL shortening service). Also assisted with general IT support, writing documentation for the university services we managed, and minor system administration (Windows, Mac, Linux)

BitWise Fellows

Web Designer

March 2008 - August 2010

BitWise Fellows is a subsidiary of BitWise Solutions. It provides high school internships to allow young students to gain real world web design and development experience. I designed web page layouts and assisted with front-end development when needed. I also did some branding and print design. Primary tools included Adobe Photoshop, Adobe Fireworks and HTML/CSS
